Thank you for your Yamato Scientific RE Series Rotary Evaporator purchase.

For best test date, we recommend you purchase our BM series Water Bath.

Please call Yamato Scientific for more details.

Read and apprehend the important warnings in this instruction manual prior to use.

*1 The rotation speed indicates performance of the unit equipped with (A, B or C type) glass set in case of unloaded operation under rated power.

*2 Glass set is not included.
2. Safety Information

Safety Symbols

Graphic Indications
This instruction manual and our products apply various indications for safety. Ignoring these indications can cause such situations as listed below. Read and understand the following warning and caution signs in this manual prior to use.

⚠️ **WARNING** Indicates the possibility of serious or fatal injury (Note 1).

⚠️ **CAUTION** Indicates the possibility of injury (Note 2) or damage (Note 3) to the equipment.

(Note 1) Serious injury: Bodily harm by electric shock, bone fracture or poisoning which may require hospitalization.

(Note 2) Injury: Bodily harm by electric shock, bone fracture or poisoning which may not require hospitalization.

(Note 3) Damage: Any damage on equipment, facility, structure, etc.

**Meaning of Graphic Indications**

Safety Information
Safety Precautions

**If the motor overloads - Stop operation immediately.**

⚠️ If you continue operation under abnormal overload conditions, the motor may stop by the safety device. If the motor stops, turn the volume knob to the minimum and cut the switch off.

* Overload means the situation when the motor surface heats up more than 90°C due to rust on ball bearing etc.,

**Never fail to ground the unit.**

⚠️ This unit uses a 3-core power cord (including ground wire). Be sure to ground the unit for safety.

**Be cautious using flammable chemicals.**

🚫 This unit is not explosion proof. Do not use in flammable or explosive gas environments and do not evaporate explosive substances.

**The flask clamp is very springy. Be careful not to break the glass apparatus.**

⚠️ The enclosed flask clamp is very springy to hold the glass apparatus firmly. Be careful not to break the glass.

**Use a trap.**

⚠️ Use a trap when you decompress by hydraulic rotary vacuum pump. When you use our Handy Aspirator, fill to overflow.

**Maintain the vacuum seal.**

⚠️ The vacuum seal is expendable. Exchange the seal in case of vacuum-down.

⚠️ You can use the vacuum seal without grease. But if you desire more longer life of the seal, put silicon grease onto the ripped side of vacuum seal. If you are afraid of sample contamination, use liquid sample.
Safety Information
Safety Precautions

**Cleaning the exterior of the RE series evaporator**

⚠ Do not use any volatile chemicals to clean the exterior of this unit. This could damage the color and shape. Wipe clean with a soft dry towel, etc.- Do not use a brush.

**If the unit is not in use for a long period of time, cut the power supply.**

⚠ If the unit is not in use for a long period of time, turn the power off and pull out the power cord for safety.
Do not use the Unit in flammable or explosive gas environments of substances listed below. Do not evaporate explosive substances.

with Condenser C

RE200(type C)

* Please understand that our products are subject to some specification changes without notice.
* The exterior designs above are just examples of the interchangeable parts.
1. **Set the stand at a stable place.**

Unpack the package and set the stand of the body on a stable place. If you do not set the unit on a stable place, the unit may vibrate or cause strange noises or the unit can fall and get damaged.

2. **Insert the rod into support of the stand.**

Insert the support rod into support of the stand, and fix by clamping screw.

3. **Pass the arm jack if applicable, and support clamp over the support rod.**

1. Turn the Arm Jack Lever counterclockwise to loosen the lever.
2. When you pass the arm jack over the rod, set the fix ring and O-ring in the middle of the arm jack (Insert the O-ring into the hollow on the fix ring).
3. Fit the motor support clamp over the support rod.
4. Fix the motor to the motor support clamp.

1. Fit the motor bearing bar to the motor support clamp, and fasten the clamping screw tightly. Put D-cut surface (flat surface) of the bar perpendicularly to the screw.

   ![Bearing bar](image)
   ![Motor Support Clamp](image)

2. Slant the motor to the right (about 45°) and fix the finger screw of the motor tightly.

   ![Finger Screw](image)

   If you do not fasten the screws tightly, vibration may occur preventing accurate measurements or the motor may fall causing the glass apparatus to break.

5. Fix the controller to the support rod.

Fix the controller to the support rod by attached clamping screw.

   ![Clamping Screw](image)
   ![Controller](image)
6. Set the Body at a stable place
Be sure to set the body at a stable place.

7. Fix the motor to the body.

1. Insert the motor bearing bar into the motor support clamp of the body, put D cut surface (flat surface) of the bar perpendicularly to either 2 upper or side screws, and fasten 4 fix screws tightly by using the attached hexagonal wrench (for M5).
Then, slant the motor to the right (about 45°), and fix the finger screw of the motor tightly.

If you do not fasten the screws tightly, vibration may occur preventing accurate measurements or the motor may fall causing the glass apparatus to break.

2. Remove the cooling condenser nut (the bigger nut with the coil ring) and coil ring when you fix the motor.
8. Inserting the steam duct into the motor

1. Before you insert the steam duct, make sure that the O-rings in the center hole of motor are not out of place. If so, reset them in the right place.
2. Insert the steam duct from the right side into the center hole of the motor.
3. Set the steam duct to the desired position with a minimum of 5mm between the blue flask remover and the steam duct holder.
4. Tighten the steam duct holder by turning clockwise. Be sure to tighten the steam duct holder firmly so that the steam duct does not slip.

* When removing the steam duct, first loosen the steam duct holder. Do not remove the steam duct holder or the rings may slip out.

* If the rings come off in setting/removing the steam duct, and you do not know how to assemble....
See the following picture to re-assemble.
9. Set the cooling condenser nut, coil ring and vacuum seal to the condenser or condenser connector.

1. Remove the cooling condenser nut on the left side of the motor.

2. Connect the cooling condenser nut and then coil ring to the condenser or condenser connector (which ever applies).

3. Insert the vacuum seal to the condenser or condenser connector (which ever applies).

It is optional to put grease on the vacuum seal.

10. Connect cooling condenser or condenser connector to the motor.

Insert the steam duct into vacuum seal, put glass flange to the motor and fasten firmly the cooling condenser nut.

* Be careful not to damage the vacuum seal when you insert steam duct into the vacuum seal in case the damage could cause leak.

Glass Type A

Vacuum Seal

Coil Ring

Above : Fitting of Coil Ring and Vacuum Seal

Below : Fitting to Motor

Glass Type B/C

Vacuum Seal

Coil Ring

Above : Fitting of Coil Ring and Vacuum Seal

Below : Fitting to Motor

When you remove the coil ring from cooling condenser or condenser connector

Hook the coil ring by the attached hexagon wrench as shown in the left picture in order to remove the ring easily from the cooling condenser or condenser connector. However, be careful not to force too hard in case the glass apparatus or coil ring might be damaged.
11. **Connecting the cooling condenser holder shaft (glass set B and C only).**

Fit the cooling condenser holder shaft firmly into the screw hole on the back of motor. Put the attached hexagon wrench through the hole on the end of shaft, and fasten tightly.

**RE200**

![Holder Shaft](image)

**RE400/500**

![Holder Shaft](image)
12. **Connecting the cooling condenser and condenser holder**  
*(B & C condenser only).*

1. Connect the cooling condenser to the condenser connector and hold by the cooling condenser clamp.
2. Insert the cooling condenser holder from the top of condenser, while fitting the other side through the holder shaft. (For type C, be sure to insert the cooling condenser holder from the bottom of condenser rather than top and then connect the condenser to the condenser connector)
3. Fit the suction cock to type B or the cooling condenser lid to type C.
13. Connecting the Evaporation and Receiving Flasks.

- **Evaporation Flask**
  1. Turn the blue flask remover upward.
  2. Connect the flask to the steam duct, and hold by the evaporation flask clamp.

- **Receiving Flask**
  1. Connect the flask to the cooling condenser or the condenser connector, and hold by the flask clamp.

For easy evaporation flask removal….
Use the blue flask remover.
1. Remove the clamp while holding the evaporation flask.
2. Turn the remover counter clockwise which will gently push off your evaporation flask.

14. Insert the feed tube into the cooling condenser or cooling condenser connector (which ever applies). Assembly is now complete.
15. Arm jack JK 200(sold separately and exclusively used for RE200)

To set at a certain height

1. Turn the lever counter-clockwise to loosen and move up or down to desired height.  □ Picture 1, 2
2. When you determine the position, turn the lever clockwise and fasten firmly.  □ Picture 3
3. After you turn the lever to fix, set the fix ring in-between at a certain height.

⚠️ When you fix, fasten firmly by lever and fix ring. If you do not fasten tightly, arm jack will not be able to sustain the motor and it could fall.

⚠️ Do not move it up or down with force when the glass apparatus is connected. The glass apparatus may come off which can cause damage.

(Picture 1)  (Picture 2)  (Picture 3)

To change the height

1. Turn the lever counter-clockwise to loosen.
   (Support the arm jack securely at this time or the motor will immediately drop downward.)
2. Then refer to the above description “To set at a certain height”.
16. Manual lift (Supplemental function of RE400/500)

Adjust the lift by using the 2 knobs (big and small) located on the right side of the unit.

1. Loosen the small knob.  Picture 1

2. Turn and keep the big knob to “Release”, and you can freely move the lift up and down.

3. After you determine the position, return the big knob to the original position “Lock” and you can fix the height.  Picture 2,3

4. After you determine the lowest position, fasten the small knob.  Picture 4,5

The lift will not go lower than the fixed position. However, this function effectively works only when the small knob is positioned within 5.3 inches (135 mm) from the bottom.
17. **Fit the hose joints to the water supply, drain and vacuum hoses at first, and connect to the cooling water and vacuum pipes.**

1. In case the joints are connected to the condenser, remove them.
2. Insert the hose joints into the water supply and drain hoses (inside diameter, 9mm), hold by the attached hose clamps and fix to the cooling pipes of cooling condenser.

   In the same way, insert the hose joint into the vacuum hose (inside diameter of 6mm), fix to the vacuum suction pipe (hose clamp is not necessary).

   **Do not fit the hoses to the hose joints connected to the condenser.**

   ![In case of glass A]

   ![In case of glass B]

   ![In case of glass C]

   Connect the drain hose with the inside diameter of 18mm to drain of cooling condenser.
18. Connect the power plug into an outlet.

1. Connect the power cord of the body to AC100V power source. Never fail to connect the earth for safety.
   * Be sure to switch off whenever you insert or pull out the power cord.
2. Then, joint the motor connecting cable to the socket on the back of controller.

19. Connect the vacuum controller, in case it is attached.

* Prepare additionally an aspirator with displacement of 10 ㎖/min. as a vacuum device.

- Combination with the vacuum controller VR100.
  You can fix the vacuum controller, as shown in the right picture, by metal fastener onto the controller box of RE400/500 Rotary Evaporator.
  In addition, you can connect the power cord of VR100 to the power socket on the back of Rotary Evaporator controller.
  * In case of RE200, you can not fix the vacuum controller on RE200 and connect the power cord of VR100 to RE200, so set and handle on a stable place near by.

Look at the back panel of vacuum controller where hoses to connect are indicated. Follow the indications and connect the hoses.

* Be sure to read the attached instruction manual to handle the vacuum controller.

20. Prepare bath (separately sold)

Set the bath in front of the body, and pour water into it.

* Be sure to read the attached operation manual to handle the bath.
5. How To Operate

1. Pour cooling water / alcohol into the cooling condenser
   - In case of Glass A or B
     Circulate the cooling water in the cooling condenser.
   - In case of Glass C
     Put dry ice and pour alcohol carefully so that it does not overflow.

2. Put the sample into the evaporation flask.
   Put the sample into the evaporation flask.
   *Pour sample to the half of the evaporation flask capacity. Liquid collected in the receiving flask shall be also kept within approximately the half capacity.

3. Heat the bath.
   Set the bath temperature at the required degree and heat up to the set point.

4. Take the flask down and start rotation.
   1. When the bath temperature reaches the set point, take the evaporation flask down into the bath.
   2. Turn on the switch on the right side of control box, and turn the volume knob to rotate at a required speed.
   3. Operate the vacuum device for evaporation.

   - When you supply sample during the unit operating
     Connect the teflon tube (inside diameter, 6mm) to the opening for sample and handle the cock to let a certain amount sucked in.

5. Move the lift up or down after you stop the rotation of evaporation flask.
   If the lift is moved up from or down into the bath while the evaporation flask is rotating, scalding may occur due to dispersing of hot water.

6. When the operation ends
   When the operation ends and you want to remove the evaporation or receiving flask, open the cock and bring back pressure inside the container to normal.

7. Operation after restarting from power failure.
   The unit restarts the same operation as before after recovering from power failure.
## 6. Troubleshooting Guide

### Problem Solving Chart

**Trouble & Countermeasure**

Check the following points if there should or seem to be some machine trouble. Contact Yamato’s Technical Service Department in case trouble is not solved in spite of countermeasures below.

9. After Sale Service and Warranty

Request for Repair

**When you request repair**

If any troubles should occur, stop the operation immediately, turn the power off, pull the power cord out and contact Yamato Scientific's Technical Service Department.

Necessary information
- Model Number
- Serial Number
- Date of Purchase
- Distributor Name
- Information on difficulties

Be sure to show the warranty when service man visits you.

**Warranty (Accessory)**

- Keep your warranty card for future references. Check the name of the distributor, date of purchase and any other contents of warranty.

- The terms of warranty is one year limited commencing the date of purchase. Repair is made without charge according to the contents of warranty.

- As for repair after expiration of the warranty period, consult the seller or our service office. As long as the function of the unit is maintained by repair, upon your request, we'll repair it with charge.

**Minimum period to keep repair parts in stock**

Minimum period to keep repair parts in stock is 7 years after the production stop. The repair parts means any necessary parts to maintain the performance of the unit.
